

synergistic designs...

meaning...acting together in a creative /innovative way.

A CREATIVE DESIGN.....Creative or abstract designs have few rules and no set patterns, yet show restraint in in the amount of plant material and number of components used.

Containers are almost always non traditional. Spatial relationships play a major role in Creative designs. Space is incorporated into the design.

Synergistic designs are made up of at least 3 parts of groupings.

Plant material and containers share common characteristics and create an artistic whole when used in combination.

Taken as a whole these designs have greater impact than each one separately.
